HIGHLAND TANK PROVIDES VERTICAL STORAGE TANKS FOR TANK FARM EXPANSION

Highland Tank partnered with a long-time customer to produce nine 10,000 gallon vertical storage tanks for a new tank farm expansion. Some of the tanks at the site are over fifty years old and are a testament to the strength of steel. The facility manufactures and distributes lubricants, greases, process oils, and metalworking fluids. These additional tanks allow the company to expand their product lines and grow their business.

The tanks will be used for bulk storage and blending. All of the tanks were custom-built to include heating coils in the bottom of the tank to keep the stored product warm.

A few of the tanks were built to accommodate Pulsair systems. These systems inject air or gas into the tank which aids in mixing and blending the liquids stored in the tank. Vertical storage tanks are a great option to store large amounts of liquids in a smaller footprint.

Highland Tank is proud to offer custom solutions for our customers challenging tank needs. Reach out to us to see how we can help with your next storage tank project.

Several of the tanks get some final touches at the Highland Tank factory
